

eluminocity GmbH, Karlstrasse 96, 80335 Munich

Press Release
September 1, 2016

Repositioning and Expansion of the Charging Portfolio.

MUNICH. The eluminocity GmbH offers an extensive range of charging stations for electric vehicles with the expansion of its product portfolio for AC chargers. Two newly developed models complete the product offering and the charging station for cities and municipalities, which is already placed on the market. The equipment variants "Basic" and "Premium" help optimizing the portfolio in view of the specific use cases for parking spaces or underground garages in semi-public areas. These newly designed configurations are based on applications and functional requirements for customer or employee parking lots of enterprises in trade and industry. "We can now offer additional charging stations for every intended purpose, ranging from hotel business to parking places in front of supermarkets and shopping malls to large staff parking lots. With our new product lines, companies can offer up-to-date charging stations for their own customers, guests or employees - which is a unique and innovative service," says Sebastian Jagsch, CEO and founder of eluminocity. In addition, two newly added mounting variants enable a much wider scope of applications to be covered thanks to supplementary installation options: wall mounting and attachment on free-standing pedestals allow additional locations to be equipped with charging stations. The pedestal-mounted version, for instance, can be used on open parking spaces without street lights.

eluminocity developed in cooperation with the BMW Group the modular product system "Light & Charge" to transform street lights into charging stations for electric vehicles. The system retrofits street lights with highly efficient LED lighting combined with an integrated EV charging solution in a fully connected environment. Furthermore, the new product expansion enables companies to offer modern services to their customers, guests or employees through providing electric charging possibilities. "Light & Charge" is already installed in several major cities such as Munich, Chicago, Eindhoven or Starnberg.
